

You are Invited to a Seminar on Lighting Design

This seminar identifies the lighting tools required to illuminate prestigious residential spaces. Lighting techniques such as accent lighting, wall-washing, wall-grazing, cove lighting and general ambient lighting will be discussed along with information regarding today's most popular light sources (lamps) and their color, intensity and energy consumption attributes. Project photos demonstrating the various lighting tools will bring these techniques to life. Relevant energy and construction code issues will be considered as well.

The presentation will be provided by Phil Acone LC of Cooper Lighting. Phil is Lighting Certified by the NCQLP (National Council on the Qualification of the Lighting Profession) and has lectured on various lighting topics. He has spoken to design professionals at functions sponsored by the IES, the Construction Specifications Institute, and other professional organizations. Phil has also lectured at LightFair International.
